

Water treatment, planned around your site.

Industrial RO supply, installation and AMC enquiries.

Domestic water purifiers, service and maintenance.

Supplier & water-treatment solutions partner

Filterwallah supports water-treatment enquiries for homes, businesses and industrial applications in Pune and PCMC. The approach starts with the water source, intended use, daily demand and site conditions, followed by a written proposal defining equipment, installation responsibilities and maintenance scope.

Capabilities

Industrial & commercial RO

Capacity selection, pretreatment discussions, plant supply, installation and commissioning enquiries.

Service & AMC

RO inspection, maintenance, membrane and consumable replacement enquiries, with a scope agreed before work.

Domestic & building solutions

Home water purifiers, spare parts, water softeners and water-treatment product enquiries.

Capacity discussions

50 / 100 / 250 / 500 / 1000 LPH and other project requirements can be assessed. Available product configuration, feed limits, output and delivery scope must be confirmed in the quotation. LPH is a nominal rate under specified operating conditions.

Define the requirement. Document the scope.

A practical project process

01

Assess

Share the source-water analysis, application, daily volume, operating hours and site location.

02

Specify

Review pretreatment, membrane and pump selection, materials, utilities, storage and maintenance access.

03

Agree

Define the equipment list, commercial scope, written warranty, exclusions and acceptance checks.

04

Commission & maintain

Agree installation checks, operator handover, baseline readings and the ongoing service arrangement.

Performance and service conditions

Recovery, reject volume, membrane life and treated-water quality depend on the agreed design, feed-water limits and operating conditions. A plant-capacity upgrade requires an engineering compatibility review. Request the written warranty period, covered components, consumable exclusions, service area and maintenance responsibilities for your proposal.

Enquiry response and technician visits are separate. Site-assessment charges, appointments, installation dates and third-party inspection arrangements are confirmed for the individual project.
